TECHNICAL SUPPORT

Our experienced engineers will be happy to support you in preparing, adjusting or interpreting your product drawings.

PACKAGING

We positively respond to almost all packaging requirements of our clients. Fully customised schemes are employed to cope with the ever changing packaging practices of the industry.

COLD FORGING

Fresh machinery and experienced technical crew are the key ingredients of our solution for accurate, flawless production.

QUALITY ASSURANCE

Setting up clear standards, continuous assessment, stringent control and continuous improvement. These are the essential components of Selectron quality management.

HEAT TREATMENT

State of the art heat treatment process managed by expert engineers and rigorously controlled by performance tests realised under actual usage conditions.

TESTING AND DOCUMENTATION

All testing carried out in our in-house dedicated QC lab. All quality checks are documented in total transparency and detail.

A SHORT HISTORY

Established for over 25 years, Selectron has become a pioneer in the sector with its investments and firsts in the fastener industry. Selectron builds its business strategy on providing innovative and market-leading products that make a difference in competition, and this is achieved by investing in quality assurance systems and human resources. The Company strives to perfect all its production and service processes in order to keep its place in the forefront of the industry.

Our production plant is based in Silivri / Istanbul less than an hour from the International Istanbul Airport. Our production team consists of technical men with 12 years experience in the industry in average. Our focus is on self drilling, self tapping, roofing, chipboard, concrete and wood screws.

Selectron branded screws are well-known for their quality and product variety. Our company provides service with quality production, economic price, timely delivery and production understanding that prioritizes customer satisfaction.
